

SURVEY

STS 201: Nanotechnology and Society ***Section 84405***

Why did you enroll in this class?

What do you expect to get out of this class?

Would you prefer that the instructor treat you as a student or as an equal who can contribute equally to the discussion? Why?

The course can fork along a number of routes with the same end goal: you learning about nanotech and its societal implications. These vary by degree of professionalism. One option is to make the course more team/project oriented, where the instructor divides the class into teams and assigns each team, for example, some topic in nanoscience to investigate and report back on. In this case, there would be a smaller number of individual assignments. The other extreme is to make the class the standard way: every student for him or herself.

Would you prefer a more team-oriented approach? Why or why not?
